MOTION

Time Capsule Challenge

Challenge Description

Just like the Code Exchange Challenge, create a simple program with the robot. For example, move around a chair, move and pick something up, etc. The program is to be written with NO comments. The purpose of the challenge is to show how the addition of comments make a program much easier to read and understand.

Materials Needed

• Materials will be determined by the individual student programs

Procedure

• Write a program to complete a simple task.
• Include NO comments.
• Save the program as "Time Capsule.c".
• Don't look at the program for two weeks.
• Come back after those two weeks, open your program, and try to remember what it was supposed to do without running the program.
• Do you remember what the program was supposed to do? Add comments to your program.
